Net and entertainment. The company enables its customers to innovate by providing the industry's broadest array of tools for creating, solving and collaborating across all industries and applications. [^1]: [^2]: Epidemic alertness: lessons from the global polio eradication initiative. Success of the global effort to eradicate polio is the source of intense international excitement and on a daily basis we are reminded of how close we are to attaining this major global public health goal. At the same time, the success of this project has been accompanied by a call to action to reach the entire world with polio vaccine. I am writing as a medical officer in a country that is a polio endemic, which means that we have seen polio cases in the past, but I am also concerned about this "risk" that remains in the minds of many and that is the reason we are not immunizing our children. I want to explain the risks of allowing polio virus to remain and to discuss how we are faring in the fight against polio today in Ethiopia.Q: How to change WebView page content dynamically I have a WebView, and when a button is clicked, the WebView should load different pages. How can I change the content of the WebView dynamically? A: Basically you can do: webView.loadUrl("www.stackoverflow.com"); If you want to add in your WebView a new address, you can use: webView.loadUrl("www.stackoverflow.com", "additionalUrl", "etc.etc.etc"); Remember that, when you add a new URL (new address), it has to have a new method with the "additionalUrl" parameter. In this example, you can see it in the second method. Check out the documentation here: java.lang.String) Hope this helps. Don't forget to handle the back button when switching between links. @Override public void onBackPressed() { if (mWebView.canGoBack()) { 82157476af
